

MIP Process Technologies...

standing strong

Despite current challenges facing the mining and minerals industry, Level 1 BEE Contributor, MIP Process Technologies ("MIP") continues to pursue a positive standing in its operations.

According to MD, Philip Hoff, they have enhanced its staff base to focus on its business areas, both locally and abroad. "We have recently appointed a new General Manager, Rogan Roulstone, who will be responsible for the day-to-day operations. Rogan comes with vast experience in project and general management".

"To date our success can be attributed to upholding customer focus, reliable products and continuous improvement and development. This infrastructure will continue to be the back bone of our company," says Hoff, "as we believe that we have excelled in customer service and good value through our minerals processing knowledge. This, in conjunction with engineering expertise enables us to adapt our designs to suit each and every client's needs."

Since inception in 2007, MIP's endeavours onto the international stage have been very substantial. They have established equipment operating successfully in Turkey, Australia, North America, Canada, and as far afield as the Philippines, just to mention a few destinations.

The company has actively pursued the export market, as Hoff believes that the world can learn a vast amount from local technology. "South African expertise in the minerals and mining industry is highly regarded throughout the world and we do have the products to prove it. We can boast a number of world firsts and are proud of these achievements. One of which, is the largest Linear Screens in the world and these were followed up with subsequent orders," concludes Hoff.

MIP designs and supplies a range of world class process equipment which includes Thickeners, Clarifiers, Attrition Scrubbers, Flocculant Plants, Slurry Samplers and Linear Screens. It has an added string to its bow with the ADCS range of Dust Extraction Equipment and Bag Filters. It also distributes the world renowned Chemineer range of Mixers and Agitators.

"MIP offers the complete range of process and dust extraction equipment – your one stop equipment supplier" concludes Hoff.
